

Electronic KanBan:

- Eliminates non-value added activities associated with maintaining a lean or kanban system
- Optimizes inventory levels associated with kanban practices
- Streamlines vendor communications

Automatically:

- Creates production orders
- Creates purchase orders
- Completes inventory transfers
- Calculates bin quantities to optimize efficiency
- Creates appropriate inventory location transfers
- Can be configured to back-flush labor and/or components

Electronic KanBan is a sophisticated lean management and execution tool, which dramatically simplifies the process of implementing and maintaining a lean/visual execution system.

Electronic KanBan streamlines the process of generating an order for kanban items to a simple wand of a barcode. Just wand a bin and an order is created. A second wand receives and closes the order, generates the appropriate inventory transactions and can be tailored to back-flush labor and materials.

Electronic KanBan can also be tailored to automatically send an e-mail notification to key personnel and vendors when a kanban event occurs. The system can even be tailored to send an end-of-day cumulative demand notification to streamline communications.

Electronic KanBan contains a bin calculation system to determine ideal bin quantities and optimize inventory levels. Electronic KanBan also contains visual cues and alerts to help identify potential problems.

If you are currently utilizing kanban techniques, Electronic KanBan can make your operation more efficient. Electronic KanBan is simple to use, easy to implement, and offers a quick return on investment. Contact our team of manufacturing experts for more information.

Agility Business Solutions, Inc. (ABS) is a world class firm specializing in the implementation of Enterprise Resource Planning (ERP) systems for manufacturers and distributors.
