Quick Production Entry

Quick Production Entry is designed to:
- Eliminate non-value added activities associated with creating and maintaining production orders
- Streamline the reporting of production transactions
- Create a "paperless" shop floor environment
- Simplify transactions such as over/under receipt of a production order.

Configurable to:
- Automatically create a production order and report as finished in a single transaction
- Streamline common transactions such as scrap reporting and component picking
- Enable batch lot and serial number tracking of items.

Quick Production Entry (QPE) has been designed to dramatically simplify the process of updating production orders on the shop floor. QPE reduces the time and effort required to update production orders and report production-related information. Now capturing vital shop floor information such as production and scrap reporting is as simple as a barcode scan or a touch screen transaction.

QPE is quick and easy to set up/configure and is simpler to use than "traditional" Dynamics AX Production Reporting capabilities.

QPE streamlines the process of reporting production-related information such as the completion of a production order and serial/lot tracking information. QPE integrates seamlessly with Dynamics AX, and enables the use of handheld data collection devices or touch screen devices.

Typically maintaining production orders in Dynamics AX requires a user to access multiple screens and is a time intensive process. QPE reduces these transactions to a simple wand of a barcode or a push of a button on a touch screen. QPE eliminates non-value added activities associated with reporting production data and provides users with a simplified interface to streamline these tasks. QPE also facilitates transactions such as over and under reporting of a production order.

QPE allows for a paperless shop floor environment. Production orders, work instructions, routing steps, product drawings and other important information can be accessed through handheld data collection or touch screen devices.

QPE Transactions:
- Completion of a production order
- Over/under reporting of a production order
- Good/scrap quantities
- Picking of components
- Serial and lot control reporting

Agility Business Solutions, Inc. (ABS) is a world class firm specializing in the implementation of Enterprise Resource Planning (ERP) systems for manufacturers and distributors.
